Target.com

Test Summary Report

Prepared by Leroy Burgess, QA Engineer | Version 1.0 | November 12, 2026

1. Overview

This report summarizes the results of manual functional testing on the Target.com public website. Testing followed the Target.com Test Plan and Test Cases document and ran within the planned 48-hour window on November 11 and 12, 2026.

Testing covered the main shopping flows before checkout: product search, the product page and cart, store selection by ZIP code, and account sign in. All testing was black-box, done from the customer's side only.

Key Results

- 10 test cases planned, 9 executed
- 8 passed, 1 failed, 1 blocked
- 1 High severity defect found: users cannot sign in to or create an account (BUG-001)
- Search, product page, cart and store selection all worked as expected

2. Test Environment

Item	Details
Application	Target.com (desktop web)
Browser / Version	Chrome 157.0
Operating System	macOS Sequoia
Device	Desktop
Tester	Leroy Burgess
Test Cycle	November 11 to 12, 2026 (48 hours)

3. Execution Summary

Metric	Count	Percent
Test cases planned	10	100%
Test cases executed	9	90%
Passed	8	80%
Failed	1	10%
Blocked (not executed)	1	10%
Pass rate of executed tests	8 of 9	88.9%

Results by Test Type

Test Type	Total	Pass	Fail	Blocked
Positive	4	3	1	0
Negative	2	2	0	0
Boundary	2	2	0	0
Edge Case	2	1	0	1
Total	10	8	1	1

4. Results by Test Case

ID	Title	Type	Status
TC-01	Search returns relevant results for a valid product keyword	Positive	Pass
TC-02	Add an in-stock item to the cart from the product page	Positive	Pass
TC-03	Set "My Store" using a valid ZIP code	Positive	Pass
TC-05	Search with a keyword that matches no products	Negative	Pass
TC-06	Store search rejects an invalid ZIP code	Negative	Pass
TC-07	Cart quantity at the minimum and maximum allowed values	Boundary	Pass
TC-08	Search field handles minimum and very long input	Boundary	Pass
TC-09	Search input with special characters and script tags is handled safely	Edge Case	Pass
TC-10	Guest cart items carry over after signing in	Edge Case	Blocked
TC-11	Sign in succeeds with a valid email and password	Positive	Fail

TC-04 (sign in with a wrong password) was removed from the test set before execution and is not counted in these results.

5. Defect Summary

Bug ID	Title	Severity	Priority	Related Tests	Status
BUG-001	User cannot create an account or log in to an existing account	High	High	TC-11 (Fail), TC-10 (Blocked)	Open

TC-11 failed because the sign in flow stops at the email step with an error. TC-10 depends on signing in, so it could not be run and is marked Blocked by this same defect.

6. Bug Report: BUG-001

Bug ID	BUG-001
Title	User cannot create an account or log in to an existing account
Application	Target.com (desktop web)
Browser / Version	Chrome 157.0
Operating System	macOS Sequoia
Device	Desktop
Reported By	Leroy Burgess
Related Test Cases	TC-11 (Fail), TC-10 (Blocked)
Steps to Reproduce	1. Navigate to Account and click it. 2. Click Sign in or create account. 3. Enter a valid email to sign in or create an account, and click Continue.
Expected Results	• The email address is validated without an authorization error.
Actual Results	• The user cannot continue past the email step, so the account cannot be accessed or created, and an error message shows.
Severity	**High** New users and existing users cannot create or access accounts.
Priority	**High** Account creation and account access are core user flows for every new and existing customer trying to sign up or access their account.
Evidence	• Screenshot 1: Create-account page showing the error banner, with the DevTools Network tab. • Video 2: Showing visual steps reproducing the error.
Status	Open

7. Exit Criteria Review

Exit Criterion	Result	Notes
All test cases executed	Not met	9 of 10 executed; TC-10 blocked by BUG-001
100% of High priority test cases pass	Not met	TC-11 failed and has a logged defect (BUG-001)
No open Critical or High defects without a documented decision	Not met	BUG-001 is open at High severity and needs a fix or a decision
Test summary report delivered	Met	This report

8. Conclusion and Recommendations

The shopping flows tested held up well. Search, the product page, the cart and store selection passed every test, including negative, boundary and edge case checks. The site handled invalid ZIP codes, no-result searches, very long input and script tags without crashing or running code.

Account access is the problem. BUG-001 stops both new and existing customers at the email step, which blocks sign in, account creation and anything that depends on being signed in. Because of this open High severity defect, the exit criteria are not met and the account area is not ready for sign off.

Recommendations

- Fix BUG-001 as a High priority item
- Once fixed, retest TC-11, then run TC-10 (guest cart carryover), which is currently blocked
- Run a short regression pass on search and cart after the fix to confirm nothing else changed
- Repeat the sign in test on a second browser (Safari or Edge) to check whether the defect is browser-specific
